

Allow productive, responsible social media use.

Social network sites can be a fast and easy way to keep your users up to date with what's happening in your organization. But they can also be a liability, and if not used appropriately, they are better off blocked.

A Smoothwall web filter with social media control allows you to:

- Selectively grant access to social media on a case by case basis with seamless user authentication.
- Limit social media use to a time-based quota with our Limit To Quota feature.
- Raise awareness about the Acceptable Use Policy with our Soft Block feature.
- Enforce policies and recognize problems early with detailed, drill down user reporting.

When it comes to social media control, the Secure Web Gateway from Smoothwall combines our intelligent real-time content filter with specialized controls designed to protect users without limiting the possibilities.

Visit www.smoothwall.com for more information about Smoothwall social media controls and other solutions.
